Subject: R4 Calls (Deep Water Horizon Incident)
Date: 04/26/2010 11:02 AM

Touched base with the R4 phone duty officer...

- not a whole lot of NRC reports (R4 thought probably because a lot of folks don't know about the NRC)

- one NRC report was received Sat 5:00pm (Strong smell of diesel fuel in air - source of odor unknown #938056)

- have received other calls (not NRC reports) on diesel odor

- OSC in Mobile (Dean Ullock) out this week but Shane Hitchcock on it

- Also discussing how to address odor issues/calls

- R1 was dealing with odor issues

[Jhana](#), Rick Jardine (R1) was just looking into air-borne concentrations of diesel and the best way to collect and analyze this fraction of petroleum along with any available health-based numbers to compare with... These odor issues can be very subjective (I've historically have had to deal with sewage) and, at this time, we're simply looking into how to evaluate this problem when/if the flare is ever sent up requesting our assistance. No mobilization or response yet for petro-odors...

- Will keep us informed if they ramp up

- R4 hotline (404-562-8700)/Dave Andrews currently on
